The indicators presented in this GDL Profile Report are created by aggregating to the sub-national and national level from representative household surveys. Detailed information on the data and methods used is available [here](#) and in [Smits \(2016\)](#).

1. The International Wealth Index (IWI) is an asset-based index that measures the economic situation of households in LMICs on the basis of their

ownership of assets, housing quality and access to public services. IWI runs from 0 to 100, with 0 meaning none of the assets and lowest quality housing and services and 100 all assets and highest quality housing and services (Smits & Steendijk, 2015).

2. Subnational GNic (logged) is estimated on the basis of national GNic and variation in household wealth (IWI) across subnational regions. National GNic equals its value in the [UNDP Database](#)
